

ANALYZING ASSOCIATIONS IN THE ORDER OF TRANSACTIONS

Abstract of the Disclosure

A method, computer program and database system for use in analyzing associations in the order of transactions are disclosed. Data is loaded from the transactions into the database system. The data includes an entry for each transaction and the transactions are grouped into groups. The transactions within each group are put into an order. An analysis of the groups of transactions is performed to find associations in the order of the transactions in the groups.
